## Work Experience

### Golang Backend Developer (Freelance)

Upwork & Freelancer.com

Jan 2024 – Present

- Developed and maintained backend systems for various clients, focusing on performance and scalability.
- Delivered API integrations and database optimizations tailored to client needs.
- Collaborated remotely with international clients to ensure timely project completion.

## Educational Background

### HomeSchool HighSchool

HomeSchooling at Sekolah Merdeka  
2022 – Present

## Skills

### Programming Languages

- Golang (current main language)
- PHP (Laravel)
- Python (Django)
- Java (Spring Boot)
- JavaScript (Node.js & Nest.js)

### Tools & Tech

- Docker, Kubernetes, Redis
- AWS, GCP (Cloud)
- PostgreSQL, MySQL (SQL Databases)
- MongoDB, Redis (NoSQL Databases)
- Linux (Ubuntu, Alpine, Arch, and others)

### Languages

- English (proficient)
- Indonesia (native)

## Personal Projects

### Account Employee Service Project

- Developed comprehensive backend services to manage employee accounts, including user registration, role assignment, office management, and screen access control.
- Implemented CRUD operations for users, roles, offices, and screen access rights (Create, Update, Delete, Read).
- Built search functionality with filter options, returning detailed user account information.
- Integrated a user-friendly frontend for role and access management.

### go-micro-services (POS API)

- Designed and implemented backend services for POS system.
- Developed and optimized API endpoints, improving response times.
- Managed data caching and communication between services using gRPC.
- Used Docker to containerize services, facilitating easy deployment.
